

BMVC 2026 — Divide-and-Conquer Plan

Today: 2026-05-07 · Abstract: 2026-05-22 (15 days) · Paper: 2026-05-29 (22 days)

Two tracks run in parallel for ~10 days, then we converge. Track A is compute-heavy (existing infrastructure on Aman's machine: DAiSEE frames, MPS, Ollama, OpenAI key). Track B is manuscript-heavy and can start day 1 without waiting on experiments.

Track A — Experiments (suggested owner: Aman)

#	Experiment	Output	Effort	Pri	Notes
A1	Full 1,784-clip CLIP zero-shot, P1/P2/P3 (1 run each)	results/clip_full_p{N}.csv + bootstrap CIs	~1 hr	P0	reuse 03_clip_inference.py, swap input CSV
A2	Full 1,784-clip LLaVA-1.5 zero-shot, P1/P2/P3	results/llava_full_p{N}.csv	~4-6 hr (overnight)	P0	Ollama; reuse 06_llava_inference.py
A3	Full 1,784-clip GPT-4o zero-shot, P1/P2/P3 + refusal flag	results/gpt4o_full_p{N}.csv with refusal column	~3 hr, ~\$27	P0	drop P3 from headline if refusal > 50%
A4	Full 1,784-clip Qwen2.5-VL zero-shot, P1/P2/P3 (single-frame t=5s)	results/qwen_full_p{N}.csv	~6 hr	P0	local; if RAM-limited use Together AI (~\$10)
A5	Multi-frame Qwen2.5-VL (t=2,5,8 averaged), P1/P2/P3	results/qwen_multiframe_full_p{N}.csv	~6 hr	P0	closes 'single-frame' reviewer attack
A6	Class-prior calibration on all 4 models' logits (post-hoc)	results/calibration_deltas.csv	~2 hr	P0	uses existing logits; no rerun
A7	Self-consistency rerun for LLaVA on N=300 (T=0.7 × 3 seeds)	results/llava_consistency.csv	~2 hr	P1	audit existing, may already be done
A8	(optional) Face-cropped CLIP probe	features/clip_face_features.npz + probe results	~6 hr	P2	only if Track B is ahead by day 10

Critical path A1–A6 by day 10 (2026-05-17).

Track B — Manuscript, figures, bibliography (suggested owner: co-author)

#	Task	Output	Effort	Pri	Depends
B1	Clone BMVC 2026 template, port paper skeleton	paper-bmvc/main.tex	~3 hr	P0	—
B2	Strip all SCB content (sections, fig3, refs)	smaller paper-bmvc/	~2 hr	P0	B1
B3	Draft new intro around 'Engagement Ceiling' thesis	sec/intro.tex	~4 hr	P0	brief + probe table
B4	Update related work: add Vedernikov 2025, OrdinalCLIP, DINOv2, ViBED-Net, calibration refs; remove SCB	sec/related.tex, refs.bib	~4 hr	P0	—
B5	Ethics paragraph: DAiSEE consent, minor faces, GPT-4o refusal as research finding	sec/ethics.tex	~2 hr	P0	—
B6	Insert probe results into results section (table + interpretation)	sec/results.tex	~2 hr	P0	available now
B7	Regenerate figures: drop fig3, update fig1/2/4 with CIs, add ceiling figure (κ across encoders × frames × readouts)	figures/*.pdf	~5 hr	P1	A1-A6
B8	Draft abstract (BMVC format, ~250 words)	sec/abstract.tex	~2 hr	P0	B3 first

Critical path B1–B6, B8 by day 13 (2026-05-20).

Track C — Joint integration (days 11-22)

#	Task	Owner	When
C1	Integrate A1-A6 results into Table 1 + Table 2; CI columns everywhere	both	by 2026-05-19
C2	Methods section: A drafts experimental setup; B drafts probe methodology	both	by 2026-05-19
C3	Discussion + conclusion: ceiling interpretation, future work, limitations	both	by 2026-05-20
C4	Internal cross-review of full draft	both	2026-05-20 to 21
C5	Abstract submission (HARD)	Aman	2026-05-22
C6	Polish pass + supplementary zip (anonymized prompts, configs, code)	B drafts, A reviews	by 2026-05-27
C7	Final review pass	both	2026-05-28
C8	Paper submission (HARD)	Aman	2026-05-29

Suggested daily cadence

Days 1-3 (08-10 May): A1, A2 launched; B1, B2 done; B4 in progress.

Days 4-7 (11-14 May): A3, A4 done; A5, A6 in progress; B3, B5, B6 done.

Days 8-10 (15-17 May): A5, A6 wrapped; B7 figures regenerated; B8 abstract draft.

Days 11-15 (18-22 May): C1-C5; abstract submission on day 15.

Days 16-22 (23-29 May): C6-C8; final submission on day 22.

Risk register

Risk	Mitigation
GPT-4o refusal rate on full test set is very high	Document as research finding; drop from headline metrics; report alongside
Qwen2.5-VL local install / RAM limits	Switch to Together AI API (~\$10)
Multi-frame Qwen2.5-VL too slow	Fall back to 8-frame uniform via API or use 3-frame avg
Co-author template migration > 3 hr	Swap roles: Aman handles template, co-author takes A6 calibration
Ceiling finding contested by reviewer ('only ViTs tested')	A8 face-cropped probe pre-empts; cite ViBED-Net for ResNet-based context

Open coordination questions

- 1. **Compute access:** does co-author have GPU/RAM to take any of A2/A4? If yes, parallelize.
- 2. **Writing voice:** single-pass merge or section-by-section drafting? Recommend section-by-section with tight ownership; merge in C4.
- 3. **A7 / A8 inclusion:** P1/P2 — only if Track B is ahead by day 10. Don't block on these.
